

Voyexa

AI-Powered Travel Super App

A travel platform that helps users discover destinations, plan trips using AI, manage bookings, and track journeys in one seamless experience.

Problem Statement

Travel planning is fragmented across multiple apps. Users often switch between booking platforms, maps, itinerary planners, and budget trackers, creating a disconnected experience.

Project Goal

Design an all-in-one travel super app that combines trip planning, booking, AI recommendations, and travel management into a single experience.

User Persona

Name:
Alex Johnson

Age:
28

Occupation:
Software Engineer

Goals:

- Plan trips quickly
- Stay within budget
- Discover unique destinations

Pain Points:

- Too many apps
- Difficult itinerary planning
- Poor travel organization

Key Features

AI Trip Planner

Generate personalized itineraries based on budget, duration, and interests.

Explore Destinations

Discover popular travel locations with ratings and recommendations.

Trip Dashboard

Manage bookings, countdowns, and travel documents.

Profile Management

Customize preferences and manage rewards.

Prototype

Interactive Prototype

Fully clickable prototype built in Figma demonstrating the end-to-end user journey.

Outcome

Project Outcome

Voyexa successfully demonstrates an AI-powered travel experience, combining planning, booking, trip management, and personalization into a modern mobile application.
